Solution for every parking garage manager looking for the best way to help customers find a vacant parking spot, get additional parking data and optimize their income. Every parking spot has an ultrasonic detector with highly visible LED lights that changes colour from green or blue to red when the spot is occupied. LED displays in front of or inside the parking garage show the number of available parking spots. Parking managers get all the data they need from system data and management software that is easy to use with clear graphic floor plans. Definitely a system no modern parking garage should be without.

## Characteristics:

- custom software solution for every garage floorplan;
- report of parking time for every single parking spot or group (by date);
- every parking spot data on single click;
- graphical visualisation for clear parking overview;
- diagonal ultrasonic sensor with LED lights for 360 degree user viewing angle;
- adjustable vehicle detection range from 0,5 to 4 m and angle 30 to 62 degrees;
- 256 detectors per central control unit;
- temperature range from -20 to 55 degrees C°.
